

CS 468 Important Clarifications & Submission Guidelines for Projects

1. Key Deliverables

a. Project Report

- i. This is a pdf that will be your **primary submission** where you will include all information about your experiments, observations, and evidence (screenshots) that would support your observations.
- ii. Formatting guidelines
 1. Please ensure that the **first page** includes the following information at the top,
 - a. Title
 - b. Names of contributors
 - c. G Numbers
 2. Ensure that the **tasks and subtasks are well organized**. Here are some of the things that would help with organization
 - a. **Clear separation between each task and subtask**. It should be very clear where a task ends and where the next one begins.
 - b. Screenshots taken using the built-in tool and not photos of your screen
 - c. **Well placed screenshots** wherever necessary. For example, if you make an observation of an output being a certain way, make sure that the screenshot is where it should belong.
 - d. A thorough and detailed explanation of each task is necessary to get full credit.
 - e. **Use numbered lists for responding to questions**; some tasks would require you to answer a list of questions. Please make sure that the answers are laid out in a numbered list. This is to ensure that we do not deduct points unnecessarily.
 3. The end of the report should contain a **“contributions” section**. In short, this section should contain information on who did what.
 4. The pdf should be named in this format.
P[project_number]_[your_last_name]_[G_number].pdf. For example if your name is John Smith and the submission is project 1, the report should be named P1_smith_G12345678.pdf

b. Project Artifacts zip file

- i. This is a zip file that would supplement your pdf as a secondary proof of work.

- ii. Please organize your project artifacts (code, executables, and intermediate files) and a copy of pdf report in the following structure and zip the folder.

```
.
└─ ZIP file root/
    ├── P1_[your_last_name]_[gmu_id].pdf
    ├── readme.txt
    ├── task_1/...
    ├── task_2/...
    ├── task_3/...
    ├── task_4/...
    └─ miscellaneous_artifacts/... (optional)
```

- iii. The readme.txt file should contain the following information

1. Contributors: Names, G Numbers
2. Work done by each contributor for proper attribution

2. Any submissions found to use generative AI will be granted a 0 on all the projects and reported to the Honor Committee.

3. GMU CS Honor Code is in full force. <https://compsci.sitemasonry.gmu.edu/academics/honor-code>
